

# Gleason-Security-Backup.

A backup of your machine should be done periodically. With the Gleason-Security-Backup you have the facility to preserve a backup on streamer tape, DVD or on hard disk.

The backup on hard drive provides the possibility to reduce the potential downtime to an absolute minimum, in

case of a defective hard disk. The defective hard disk will be restored by a new one and the operating capability will be reconstructed.

For a **Siemens 840C** the backup will be updated on streamer tape or replaced by an appropriate medium. There is also the facility to create a mirror drive on a spare hard disk.

For a **Siemens 840D** a Ghost of the hard drive will be burned on a DVD or a mirror drive will be done on a spare hard drive.

Work-pieces programs which have continuously been created and optimized by your employees contain a lot of working hours and know-how. The loss of these programs will requires again a high effort of program optimization. The cost of this effort is not included in the following comparison between creating a backup and the potential downtime costs for a defective hard drive.

Create Backup	
Security-Backup	€ 1,200.–
<b>Flat-rate except travel costs</b>	<b>€ 1,200.–</b>
Optional hard disk for Siemens 840D	€ 1,350.–
<b>Total costs backup on hard drive except Travel costs</b>	<b>€ 2,550.–</b>

**A defective hard disk will cause breakdown of your machine. The costs without an actual backup, for production loss, engineer and spare parts can easily raise up over € 10,000.–**

*How up to date is your machine/s backup?*
